## Discussion

In response to Andy Putnam's question of October 8, 2003 regarding why all of the ISEDS analytical result records appeared to be updated. We have a field in SWD that identifies if a groundwater or surface water sample was filtered in the field prior to submission to the lab for analysis. In July we consolidated this information from two fields into one and I believe this is why the records you had previously pulled were updated. We overlooked this field during the design of ISEDS. I will work on an emergency SCR to correct this deficiency in ISEDS. I will get back with you on when we expect this to be in production.
